

I would almost agree to this petition, if it gave full General HF to No Code Techs with the stipulation of 10W PEP Maximum, all modes. Next, rather than raise the Code standart to 15wpm, make it 18-20; 18-20wpm is truly very useful. 5wpm is a vestigial token, not very useful in practice. 20wpm provides for an Excellent Base Line ability to communicate with even the most basic, and crippled communications devices. We must not forget that CW is the Genisis mode, the mode that began the entire existence of all RF wireless today.
